SUMMARY

Flutter Developer with 2+ years of experience spanning both product-based and service-based development. Led architectural migration work on a 100,000+ user production platform (GoSports), and independently owned Flutter delivery across multiple client applications – including full legacy codebase refactors, backend debugging (Node.js), and cross-functional technical leadership within small teams. Strong in Clean Architecture, BLoC, offline-first design, and diagnosing production-level issues end-to-end.

EDUCATION

Faculty of Computers and Information Mansoura University, 2019 – 2023
Bachelor's degree in computer Science
Graduation Project: Recruitment & Training App (A+) for companies and developers, supporting job posting, candidate evaluation, and technical interview preparation.

WORK EXPERIENCE

GoSportNetWork 🌐, Flutter Developer 03.2025 – Present
Cairo

- Contributing to the GoSports Version 2 app with improved performance and scalability.
- Built a complete NFC attendance system end-to-end, including a native iOS integration via Swift (NFCReaderSession) through Flutter platform channels, resolving platform-specific NDEF limitations.
- Designed and shipped a full deep-linking system (Firebase Hosting, Android App Links, iOS Universal Links) with duplicate-prevention and cold/warm/background launch handling.
- Built backend endpoints in TypeScript (Cloud Functions), including secure member-list APIs with Auth token verification and bulk import logic for 175+ records.

Khatab web 🌐, Flutter Developer 06.2024 – 03.2025
Mansoura

- Worked as the sole Flutter developer, owning end-to-end delivery across multiple client applications alongside a UI designer and backend developer.
- Refactored and modernized 6+ legacy applications (دليل الطالب, SalamTaxi, Yalla Tawsela, Ghena Alshaam, مزاد, اصلاح) – rebuilding outdated codebases and re-publishing them to Google Play and App Store.
- Worked directly in the Node.js backend to debug and resolve integration issues, extending beyond frontend-only involvement.
- Acted as the team's technical reference point for data structure decisions, regularly consulted by UI and backend teammates on how to model and return data for new features.

Code Click, Flutter Developer 12.2023 – 06.2024
Mansoura

- Built template-based ride-hailing and delivery applications with live tracking and payment integration, as part of an early-stage startup building reusable app templates.
- Gained experience in rapid prototyping and startup-paced development; company later ceased operations.

TECHNICAL SKILLS

State Management
Bloc, Getx.

Version Control
Git, GitHub, GitLab, SourceTree.

API
WebSocket, Restful API, Dio, Retrofit, Http.

Architecture & Design
MVVM, MVC, DI (Injectable/GetIt).

Local Data Storage
Shared Preferences, Hive, Isar.

Backend Exposure
Node.js, TypeScript (Cloud Functions), REST API design & debugging

Payments & Financial Systems Digital Wallets
Subscriptions, Online Payments (Visa, Apple Pay, Google Pay), Transaction Lifecycle Management

DevOps & Tools
CI/CD GitHub Actions, Fastlane, Firebase App Distribution

Firebase integration
Crashlytics, Realtime Database, Cloud Messaging, Firebase Storage, Firestore, Remote Config, Analytics.

App Publishing
Google Play, App Store.

Hardware & Native Integration
NFC, Camera

PROJECTS

GoSports NetWork

[[GooglePlay](#) - [AppStore](#) - [Desktop](#)] Worked on a large-scale sports management platform serving **100,000+** active users across **1,500+ foundations**, including **Real Madrid Academy** (Spain). Built real-time attendance & check-in/out system integrated with physical gates. Developed financial modules: **subscriptions, payments, reports**, and multi-currency handling. Implemented digital player cards and player evaluation systems. Integrated **Apple Pay & Google Pay** for secure digital payments. Designed an offline-first architecture with 100% local caching using **"Isar"**, minimizing server reads and ensuring high performance. Ensured scalable architecture using **BLoC, Clean Architecture**, and modular Flutter components.

دليل الطالب

[[GooglePlay](#) - [AppStore](#)] A Haraj-style student marketplace & services platform helping students find universities/institutes. Engineered the application using **Clean Architecture** and the full **BLoC** (Event-Based) pattern to handle complex business logic and state transitions effectively. Implemented **'Hive'** for efficient local caching of user preferences and session management. Designed dynamic listing modules and advanced search capabilities to support a wide range of categories and services

SalamTaxi

[[GooglePlay](#)] Engineered a real-time ride-hailing platform, 'Salam Taxi,' connecting passengers with drivers through a seamless geolocation interface. Integrated **Google Maps** SDK and Directions API for precise **live tracking, route optimization**, and dynamic fare calculation. Built a scalable codebase using Clean Architecture and the BLoC pattern to manage complex socket-based ride states (booking, arriving, in-ride).

Manaber (freelance project)

[[GooglePlay](#), [Desktop](#)] The aim of the application is to facilitate interaction between the authorities of the Manaber Al Amal Physical Therapy Center for Disabled Children and its sponsors In terms of recording user data in the center's system to save data on their visits periodically and transfer it to specialist doctors .

COURSES & TRAINING

Problem Solving L1 , Coach Academy	08.2025 – 10.2025 Cairo
CCIC , FCIS	07.2022 – 10.2022 Mansoura
Clean Architecture In Flutter 3 (Arabic) , Ismail Elmogy	07.2023 – 09.2023 Udemy
Flutter BLoC State Management & Firebase [2025] From Scratch , Maftuna Zokirova	07.2025 – 08.2025 Udemy

VOLUNTEERING & ACTIVITIES

CIS (Student Activity)

Video Editing & Motion Graphic

GOC (Student Activity)

Video Editing & Media Team

Mega (Student Activity)

Logistics - Event and Content creation
